## **Project Title: Locus**

### **PROJECT GOAL AND OBJECTIVES:**

#### **MOVITATION:**

How important is your vehicle to you? Do you treat it as your family member, if so what if your friend requests for the car to go for a ride with his girlfriend? Don't worry if you have "Locus" app with you anymore; you can track your vehicle anytime, anywhere wherever you are. Also, when you are traveling, the app reminds your favorite locations near to you.

#### **SIGNIFICANCE/UNIQUENESS:**

Our investigation for applications which provides location based services like reminders for favorite spots near current location, tracking vehicle, didn't fetch great results. This made us thinking about creating an application with advanced technologies that brings in real time and accurate information available to users all the time.

#### **OBJECTIVES:**

The objective of our web/ mobile application is to track their loved vehicle anytime, anywhere if shared to anyone till it reaches to him. Also, notifying his/her favorite spots available near to his current location when in travel. Our best efforts appear in presenting the most accurate and realtime data available to users all the time.

#### **SYSTEM FEATURES:**

- The user can track where the vehicle is moving.
- The user can estimate the arrival time of the vehicle.
- The user can find the distance traveled by the vehicle.
- The user can receive notifications about his favorite spots near his current location.

As a part of our project's 1<sup>st</sup> increment, we have implemented the Login page, a register page and on successful login redirects to the Home page. At first, a new user needs to register and can login using his name email and the password. Here we will be using the Google Maps location API to get the current location of the user.

## FEATURES:

1. Google Location Services: Google's location services is implemented as two features i.e Location Reporting, and Location History:
  - (1) Location Reporting is the feature that shows you places nearby, suggests local businesses, or helps you find the favorite spots by tracking the device.
  - (2) Location History is the feature that keeps track of where you've been, tracks the moving vehicle and for estimating the distance traveled by car using the smartphone.
2. Push Notification: Once the user sets his favorite spots, in case if there is any favorite spot nearby then a notification will be given to his device.
3. Map Locations: We are integrating the google maps to our application so that the user can view the exact location on the maps and locate the favorite spots nearby and also for tracking the vehicle.
4. Gesture Recognition: The gesture recognition API allows to register callback functions to be called when the user performs meaningful gestures like shaking the device which helps you display your favorite spots.

## SERVICE DESCRIPTION:

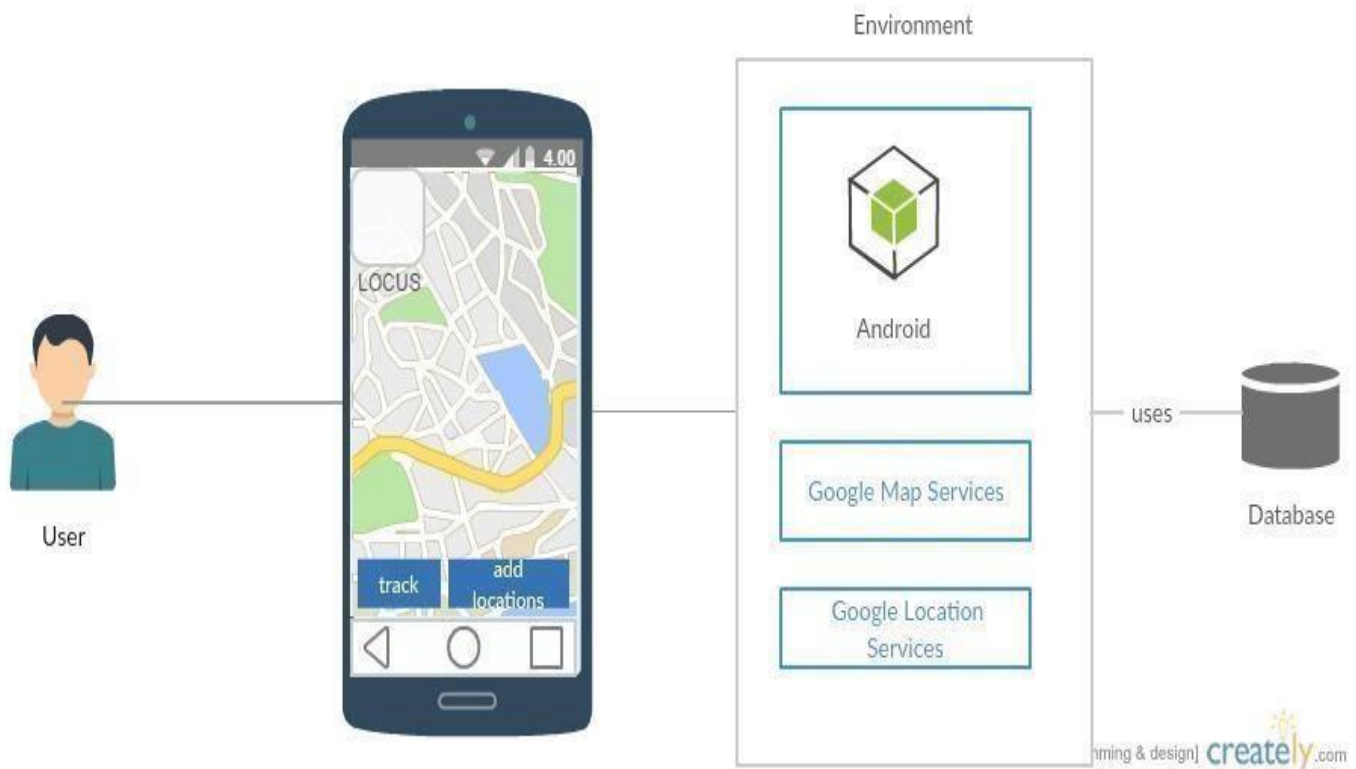

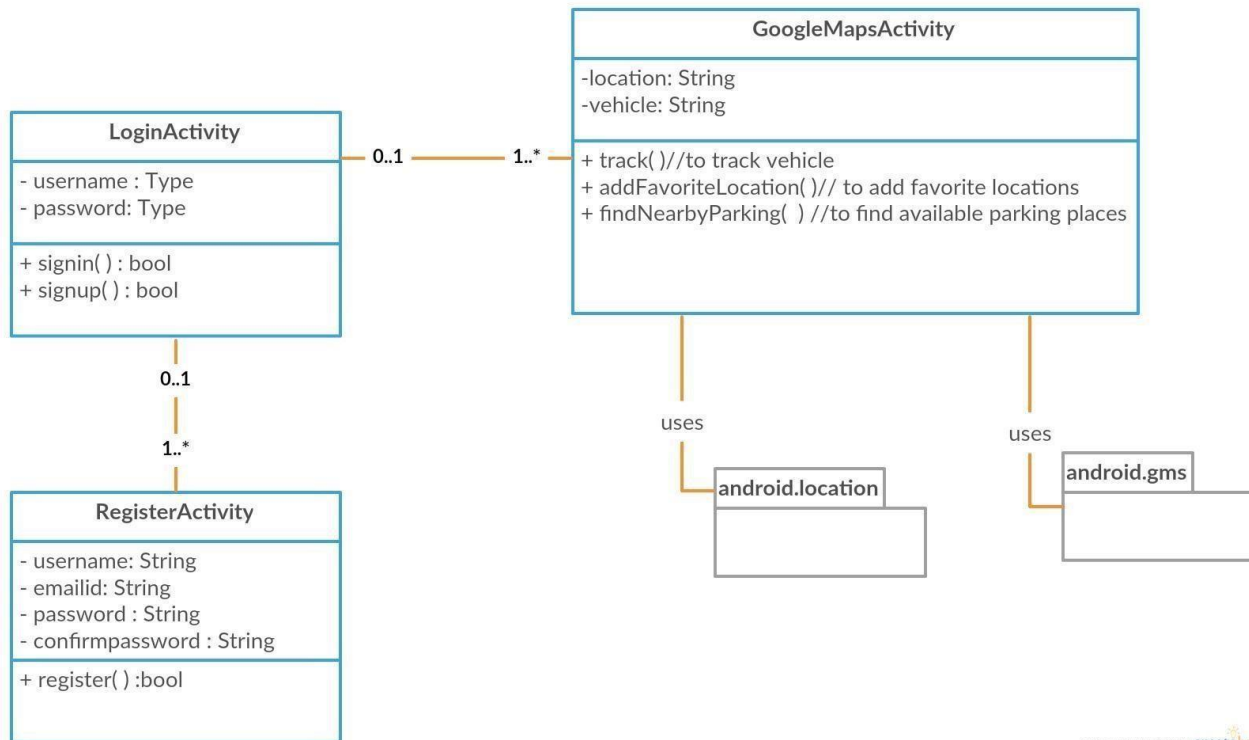

1. Maps: Maps information is displayed using the Google Maps API which gives us the information about the houses in a locality.
2. Gesture Recognition: The gesture Recognition API is used to pin the favorite spots of the user using the Gesture Recognition Toolkit(GRT).
3. Locations: To get the auto locations fill we will be using the Auto Location fill API.

The screenshot displays a registration form on an Android emulator. The form includes input fields for Name, Email, UserName, Password, and Confirm Password. The Name field contains the text 'venkatesh' and the Email field contains 'pallay@gmail.com'. The Password field is currently empty and is highlighted with a red border, indicating a validation error. A red horizontal line is drawn across the Password field. Below the form fields is a 'REGISTER' button. At the bottom of the screen, a message box states 'field should not be empty', which is a validation error for the Password field. The background of the form is a cityscape image.

Name  
venkatesh

field should not be empty

# TEST CASES:

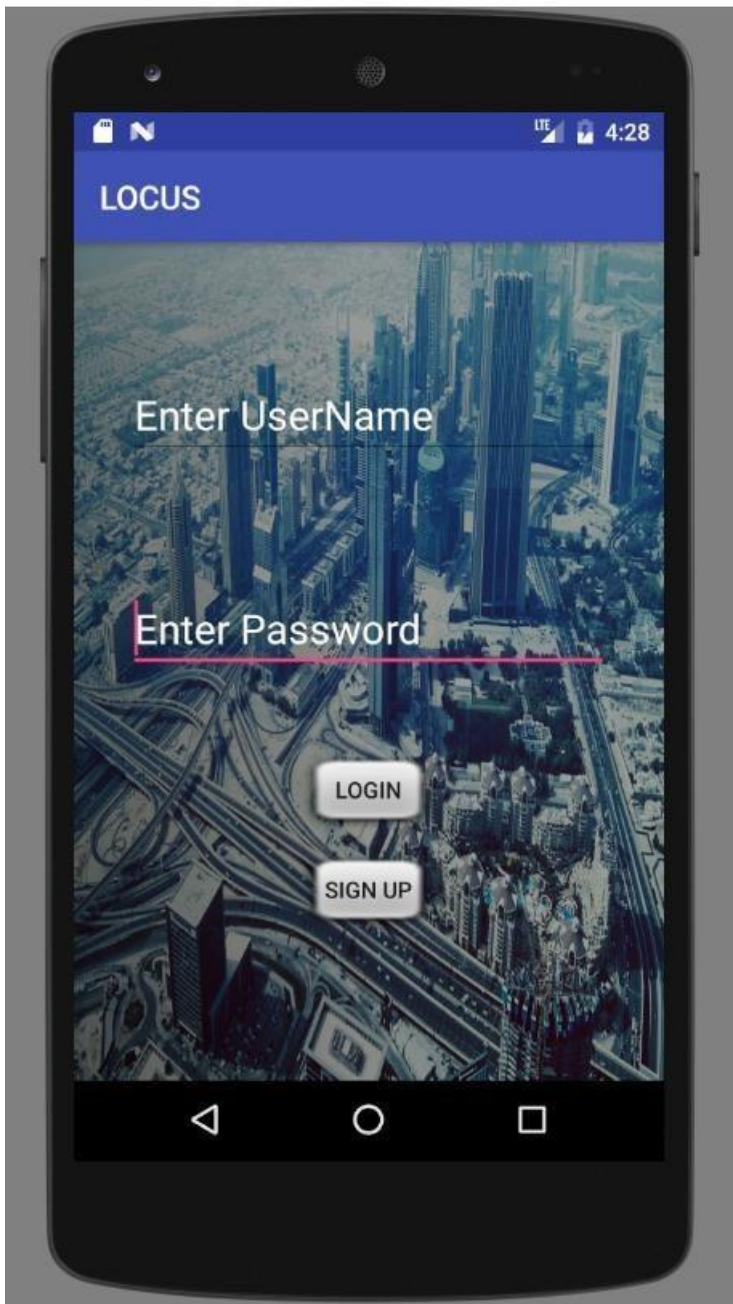

Test Case Name	Test Description	Expected Results	Pass/Fail
Login	Enter Invalid Userid and Invalid Password	Invalid Login Error Message should be displayed	Pass
	Enter Valid Userid and Invalid Password	Invalid Login Error Message should be displayed	Pass
	Enter Valid Userid and Valid Password	Application Should Be Redirected to Home page	Pass
Sign Up	Enter Email Id without @	Invalid Email id should be displayed	Pass
	Enter different confirm password	Invalid Error Message should be displayed	Pass
	Blank Spaces	Invalid Message should be displayed	Pass

## REGISTER PAGE:

Android Emulator - Nexus\_5\_API\_24:5554

The screenshot displays a registration form on a Nexus 5 emulator. The form is overlaid on a background image of a city skyline. It contains five input fields: Name, Email, UserName, Password, and Confirm Password. A red horizontal line is visible above the Email field. Below the fields is a button labeled "REGISTER". The Android navigation bar at the bottom shows the back, home, and recent apps icons.

Field Label	Input Type
Name	Text
Email	Text
UserName	Text
Password	Text
Confirm Password	Text
